WEATHER

WEATHER SYNOPSIS BY REGION:

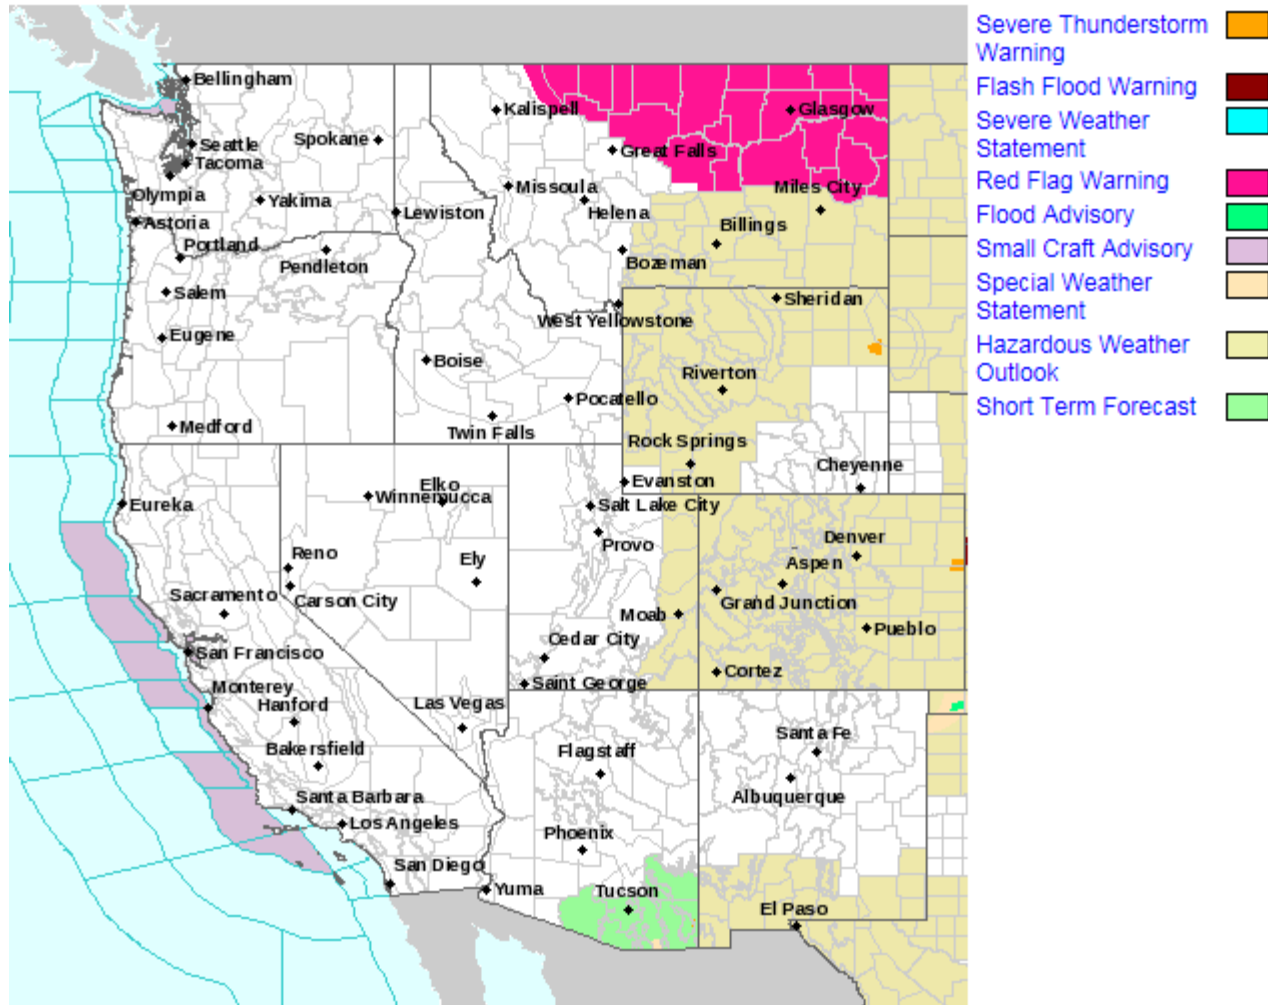

NORTHERN CALIFORNIA

A weakening low pressure trough over the North California today will allow temperatures to warm a bit today, but still remain below normal. A stronger low pressure trough in the Eastern Gulf of Alaska will drop into the area Saturday and bring increasing southwest to west winds and stronger onshore flow. There is a chance of showers and isolated thunderstorms in the far north Sunday as the trough and associated front pass directly over the region. Winds will be moderate to locally strong out of the south to southwest ahead of the front and shift to moderate northwest winds behind the front. Temperatures will be below normal again Saturday and Sunday. A significant warming and drying trend will begin Monday as the trough and front move out of the area and high pressure builds in from the Desert Southwest. Periods of northeast and offshore surface winds will enhance the warm and dry conditions from the western Cascade-Sierra slopes to the coast beginning Monday and continuing through the end of the week. Also, at this time forecast models are showing monsoon moisture moving northward into the North California as early as Thursday night, and continuing through the following weekend. The onset of lightning on top of a significant heat wave and very dry surface conditions could indicate a period of dry lightning.

SOUTHERN CALIFORNIA

High pressure over Texas will expand into the Desert Southwest today and Saturday causing temperatures to warm to near normal, with 70s to low 80s in the mountains and mid 80s to mid 90s in the valleys. The high pressure area will shift eastward as a Pacific trough drops down the West Coast bringing a few degrees of cooling Sunday and Monday. Westerly winds of 15 to 25 mph with gusts to 40 mph will surface across the desert passes through Monday evening. Minimum humidity will be mainly between 12% and 25% above and inland from the marine layer through Monday. High pressure will expand westward once again and cover the entire southwestern part of the country starting Tuesday which will bring significant warming to the region. Widespread triple digit heat will occur over the inland valleys and foothills Wednesday through the end of next week. Southeast flow aloft around the high pressure area will bring isolated to scattered afternoon showers and thunderstorms to the mountains and deserts of Southern California starting Wednesday and to the Sierra starting Thursday.
